BYOC Readiness Assessment Tool

Bring your own computer (BYOC) programs come in many varieties, from a BYOC Light model, where limited content is consumed but rarely created (e.g., using smartphones), to Full BYOC models, where full-fledged content creation and consumption is supported. Successful deployment of each BYOC model depends on a different mix of capabilities, so understanding where to focus limited resources is critical.

The BYOC Readiness Assessment Tool:

- Collects information about relevant capability maturity
- Calculates organizational preparedness for each of the BYOC models
- Provides customized advice to maximize BYOC success.

The outputs of the tool can form the basis for BYOC preparation/gap remediation planning, and provide a better understanding of the cost and effort associated with implementing BYOC effectively.
