Cloud Data Integration Appropriateness Assessment Tool

With many deployment options, impeding factors and various other considerations, organizations can find crafting their own Cloud data integration (DI) solutions quite challenging. Deployment of a Cloud DI solution that aligns with your enterprise DI architecture and needs concerning personnel, process and technology is crucial for efficient management of your data.

Leverage this tool to figure out whether or not Cloud DI is necessary for your organization, and whether DIaaS, On-Premise or Hybrid would be the most compatible deployment option.
