Data Center Facility Budget Tool

Building a new data center is an extensive and expensive project, and thus it is important to determine an accurate budget. A useful budget should not only include the initial capital expenditures, but should extend out into the lifespan of the data center to reflect operating expenditures.

Use this customizable data center build-cost analysis tool from [Info~Tech Research Group](#) to calculate the cost per square foot for your data center project, along with a picture of ongoing operating expenses.
