Desktop Virtualization TCO Calculator

Based on your current environment, this tool will help provide your organization with a TCO comparison for deployment of a fleet of PCs relative to virtual desktops. The tool takes numerous factors into account, including:

- Number of desktops/seats
- Projected growth
- User makeup
- DV licensing costs
- Microsoft Windows licensing costs
- Application licensing costs
- Energy and infrastructure/access device costs
- Staffing costs
- Server/storage requirements

Use this TCO calculator from Info~Tech Research Group to gain a deeper understanding of the total costs involved in a virtual desktop implementation.

Included in this ZIP file are:
