Extend SharePoint Prioritization Tool

Navigating a path to success for their SharePoint deployment is challenging for most enterprises. The most difficult step is choosing where to start.

- Prioritize the changes that can affect user behavior.
- Build a list of potential functional areas to either customize, or purchase, a third-party solution.
- Understand where to start in the extension process.

Many SharePoint issues result from five major problems: content management, workflow, administration, mobile and social. Use this tool to prioritize how you deal with the large problems by tackling specific SharePoint issues.
