## The Four Components of a Fast-Paced Organization: Going Beyond Lean Sigma Tools

If you examine the characteristics of successful organizations, you will find that speed is a common denominator. Once there is a focus on speed, industry-leading improvements follow, momentum is created, and employees become further engaged to continue executing the strategy.

**The Four Components of a Fast-Paced Organization: Going Beyond Lean Sigma Tools** examines the components that must be in place for manufacturing and service organizations to achieve world-class business results at a rapid pace: leadership and mentoring, process design and visual value streams, organization structure for sustainment, and fast knowledge sharing.

This expert from chapter 1 focuses on the first component: leadership and mentoring. Leaders have a responsibility to develop a strategy that will be successful; they are responsible for the organization's culture; they need to understand their role in developing people so that everyone can contribute to the success; and they must also understand they have a social responsibility.
