Security Information Event Management Landscape Presentation

Security Information & Event Management (SIEM) technology has emerged as a key component in careful monitoring and analysis of millions of network events that may represent a threat to your business. But how do you choose the right solution?

This presentation from [Info~Tech Research Group](#) will give you and your executive team a high-level view of the SIEM landscape and rate vendors in the sector in the classic quadrant model.

Use this extensive 58-page PowerPoint presentation to:

- Understand current capabilities of SIEM vendors and evaluate offerings for best fit.
- Use scenario analysis and case studies to shortlist vendors.
- Assess implementation recommendations and pitfalls.

Some key pointers in the research: Focus first on business requirements so that current and future SIEM objectives can be achieved through the vendor and product chosen ó whether the objective is simplifying compliance reporting, making security event management more efficient, or improving IT risk management. And consider managed security service providers as a means to cost-effectively implement real-time monitoring of security events.
