## Job Description:

### Sr. Dev Ops Engineer / Build Release Engineer

We need to create a strong dev ops team to lead our configuration management and release platform. You will have shared responsibility for deploying releases. You will also play a large role in helping us make the transition to be a fully cloud-based platform. To succeed, you should have experience with various version control systems (perforce, svn, git, etc), build tools (ant, maven, etc) and cloud automation tools (Chef, Puppet). Your goal is to fully automate the provisioning of servers, deployment of code and general configuration management. You will be working closely with development, QA, and product teams and your opinion and the code you write will define how we ship our product.

#### Skills and Requirements

- Three plus years of configuration management and engineering for large scale websites, ideally supporting an agile development process
- Deep understanding of version control systems (Perforce, svn, Git, etc.), including branching and merging strategies
- Experience with software build tools (Maven) and continuous integration tools (Jenkins)
- Experience with Linux environments and scripting languages (we tend to use bash but are open to any language)
- Experience working with cloud platforms (EC2, Rackspace Open Cloud, etc.) and cloud automation tools (Chef, Puppet).
- Comfortable working late evening hours, which is when most releases and patches occur
